

Veronica Kinsler is Professor of Paediatric Dermatology and Dermatogenetics at Great Ormond Street Hospital for children and UCL, and Principal Group Leader of the Mosaicism and Precision Medicine laboratory at the Francis Crick Institute in London. She also holds a UK National Institute of Health Research Research Professorship. She trained in medicine at Cambridge, paediatrics and paediatric dermatology in London, molecular genetics at UCL, and worked part-time for 15 years to look after her family. Clinical work is focused on rare paediatric skin conditions, in particular mosaic and/or pigmentary disorders. Laboratory research is focused on identifying the genetic causes, and design or repurposing of targeted therapies. In parallel, the lab extrapolates findings to gain valuable insights into common conditions such as melanoma, and into normal human embryology. She is the current President of the ESPD, senior editor of the Harper textbook of Pediatric Dermatology, and director of Paediatric Dermatology Online Courses.
