

Prof. Tamar Nijsten

Tamar Nijsten performed his training in dermatology at the University of Antwerp (Belgium). He did part of his PhD in dermato-epidemiology at the Harvard Medical School from 2001-2003. Since 2005 he joined the department of dermatology at Erasmus MC (Rotterdam, Netherlands) and became full professor and chair in 2014. Prof dr Nijsten has a strong interest in epidemiology and public health aspects of dermatology with a focus on skin cancer, aging and inflammatory dermatoses. The facial aging research of Nijsten's group is based on a rich population based cohort (Rotterdam Study) that is ongoing for 35 years. The granularity of the cohort and its longevity provides an unique opportunity to better define and understand skin aging.
